WATER SERVICES

WATER TRUCKS

Big Eagle's Water truck service is used to supply water to drilling rigs and Big Eagle Hydro-Vac units in the field.

Each Big Eagle Water truck unit is equipped with 100-110 barrel tanks, with hydraulic-driven 4" Bowie pumps and a rear spray bar for dust control. All water handling equipment installed on Big Eagle's Water trucks are mounted with hot boxes or heated cabinets to prevent freezing during winter work.

Big Eagle has a large fleet of dependable tri and tandem Water trucks available for our customers, which allow for faster loading time and more efficient delivery of service.

BENEFITS OF BIG EAGLE WATER TRUCKS

- Dependable equipment
- Faster loading time
- Late model fleet with new rig shacks, enabling operators to live on site
- Operators are fully trained in rig procedures and the operation of their equipment

TRI-AXLE WATER UNIT

APPLICATIONS OF BIG EAGLE WATER BULKERS

Big Eagle successfully provides customers with the following services:

- Filling large tank farms
- Pipeline filling
- Pipeline de-watering
- Inhibitor delivery to service rigs

All operators have current TDG and WHMIS training and are skilled in field service.

FLUID AND FLUID BLENDS

As a sub service to frac operations, Big Eagle also markets fluids and blends to shallow gas clients. The size of our fleet enables us to service both large one-frac or multiple small-frac operations while maintaining outstanding customer service and quality control.

All units are equipped with GPS tracking to assist in dispatching the closest unit to our clients.

TEXAS WATER BULKERS

Big Eagle provides a fleet of Water Bulkers designed to service the production and completion departments involved with shallow gas.

Our fleet of Water Bulkers are cutting-edge power units pulling 38m³ aluminum tri-axle trailers. We can also provide straight tank trucks pulling quad pup units for a 50m³ capacity or Super B trailers at 64m³. All units are equipped with heated pumps and plumbing to get the job done, regardless of weather conditions.

Although Big Eagle can deliver production fluid to storage tanks, we also offer Trailer Frac services, whereby fracturing fluids can be delivered on location directly from our trailers. We have years of experience with this practice. We also handle after-frac and after-coil clean out disposal of fluids to disposal locations.

FLUID HAULING AND WATER SERVICES

Big Eagle Services is pleased to provide Water Bulklers for the transport of various oil field fluids. Our fleet of Water Bulklers is comprised of first and second generation tractor-trailer combinations for production applications.

Big Eagle's first generation fleet of Water Bulklers is comprised of Western Star tractors pulling Heil trailers capable of an on-site lease capacity of 38m³ and highway capacity of 30m³. Our second generation equipment includes Western Star tractors pulling Stephens tri-axle trailers.

SOUR-SEAL TRI-AXLE TRUCK WITH QUAD WAGON

Our equipment was designed with well completion (fracturing) in mind. Additionally, all of our trucks were engineered to be compatible with this use. Each truck comes with 2 x 4" frac valves, isolation lines off the load deck for quick unload or flow access into frac blenders, and other specialized equipment. All trucks are equipped with a 4" bowie pump and at least 100 feet of load hoses. All the tractor units have heated work boxes that encase the pump system to eliminate winter freezing issues.

Second generation equipment was designed for specialized fracture programs and dangerous goods hauling. Second generation tri-axle trailers are all manufactured by Stephens Manufacturing and trailers are coded to 407 spec standards. Each trailer is conical in design and has two compartments. The Stephens trailers come with 4 x 4" frac valves and 100 feet of load hoses. An adaptable manifold can be attached at clients' request that enables flow through frac blender rates of 5m³ per minute. These units provide the following services to our clients: oil hauling, blow back removal to disposal, methanol frac fluid hauling, inhibitor delivery and potassium chloride for various applications.

FLUID ACCOMPANIMENT

To enhance service to our clients, Big Eagle Services added an oil field fluids accompaniment to the production division. Big Eagle Services currently sells methanol in various percentages for fracturing and to stimulation and production clients. Furthermore, Big Eagle mixes at various blends of KCL (potassium chloride) for well kills or specialty fracs.

Whatever our client's fluid hauling needs, Big Eagle is ready.
